Outline

Working with equations

- Aligning the same equations

- Omit equation numbering

- Ugly alignment

Discussion

Working with equations

We define a set of equations as

$$a = b + c^2, \tag{1}$$

$$a - c^2 = b, \tag{2}$$

$$\text{left side} = \text{right side}, \tag{3}$$

$$\text{left side} + \text{something} \geq \text{right side}, \tag{4}$$

for all something > 0 .

Aligning the same equations

Aligning the equations by the equal sign gives a much better view into the placements of the separate equation components

$$a = b + c^2, \tag{5}$$

$$a - c^2 = b, \tag{6}$$

$$\text{left side} = \text{right side}, \tag{7}$$

$$\text{left side} + \text{something} \geq \text{right side}, \tag{8}$$

Omit equation numbering

$$a = b + c^2$$

$$a - c^2 = b$$

left side = right side

left side + something \geq right side

Ugly alignment

Some components do not look well, when aligned. Especially equations with different heights and spacing. For example,

$$E = mc^2, \tag{9}$$

$$m = \frac{E}{c^2}, \tag{10}$$

$$c = \sqrt{\frac{E}{m}}, \tag{11}$$

$$\tag{12}$$

Take that into account.

Discussion

This is where you'd normally give your audience a recap of your talk, where you could discuss e.g. the following

- ▶ Your main findings
- ▶ The consequences of your main findings
- ▶ Things to do
- ▶ Any other business not currently investigated, but related to your talk
